An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

In the specification:

On page 16, line 8, "VR" in equation (2) has been changed to - - TR - -.

On page 19, line 12, "VR" in equation (3) has been changed to - - TR - -.

In the claims:

In claim 8, line 3, before "larger rate" - - a - - has been inserted.

In claim 8, line 8, before "larger rate" - - a - - has been inserted.

Claims 10-16 have been cancelled without prejudice to file a divisional application thereon. Note however because of allowed linking claim 9, a terminal disclaimer (see claim 10) may be required in a future divisional application.

The following is an examiner's statement of reasons for allowance:

Both the dew point temperature determination means and the outside windshield temperature estimate means have been claimed in means plus function format thereby invoking 35 USC 112, sixth paragraph. Consistent with MPEP 2181, incorporated here by reference and In re Donaldson, the disclosed structures/algorithms corresponding to these claimed means recitations and their narrow 112 sixth paragraph equivalents (see Valmont case, MPEP 2183, incorporated here by reference), have been evaluated by the examiner. The examiner has concluded that none of the prior art of record here estimates the outside windshield temperature in the manner claimed, under 35 USC 112, sixth paragraph. In fact the problem of condensation on the outside of the windshield is relatively rarely even recognized in the prior art, with the bulk of the references cited here dealing with the problem of condensation on the inside of the windshield. Solutions of the problems in inside dew formation do not readily translate themselves into solutions in outside dew formation particularly given the fact that the air inside of the vehicle is relatively stagnant compared to air outside of the vehicle when the vehicle is moving considerably changing the dynamics of condensation formation on the windshield exterior versus the dynamics of condensation formation on the windshield interior.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
